### Vol 16 - No 44 HEAD INJURY ACCIDENT

#### INCIDENT DESCRIPTION:

A worker was operating a D8 dozer while other employees were operating scrapers. The dozer operator was helping the scraper operators by pushing their machines when they got stuck. When one of the scrapers was unable to move on an uphill area, he began to push him to loosen him. While pushing the scraper, the scraper operator went too fast and got away from the dozer. As a result of this, the front blade of the dozer pushed into the ground causing the dozer to jolt to a stop. This caused the operator to lung forward toward the windshield. By not wearing his seatbelt the operator hit his forehead on an air conditioning box on the ceiling of the cab. He received a head gash approximately one inch long.

#### SAFETY RECOMMENDATIONS:

1. Always wear your seatbelt while operating any type of machine.
2. Have constant contact with the rest of the crew members.
