

TOOLBOX SAFETY TRAINING

Company _____ Location _____ Date _____

Vol 17 - No 14 PROPER BARRICADES

Barricades are defined as an obstruction to detour the passage of persons or vehicles. Construction sites are always changing the daily routine that sometimes involves detouring vehicular traffic. In some cases there is an officer present to assist with traffic control, in others there are flaggers. Whichever the case may be barricades are needed to control the safety of the work site. Remember that in most cases where barricades are in place it involves the general public and may be necessary to detour non-construction people who are not always as observant as we are at the job site. Always display the proper traffic control devices, proper detouring devices, JSA'S, and have a trained person in flagging and traffic control on site.

Your safety and the safety of the motorists and pedestrians around your work zone rely on your use of common sense. Always make safety awareness your number one priority.

1926.202 Barricades

Barricades for protection of employees shall conform to Part VI of the Manual on Uniform Traffic Control Devices (1988 Edition, Revision 3 or Millennium Edition), which are incorporated by reference in §1926.200(g)(2).
